

MICROSOFT COPILOT STUDIO

Copilot Studio

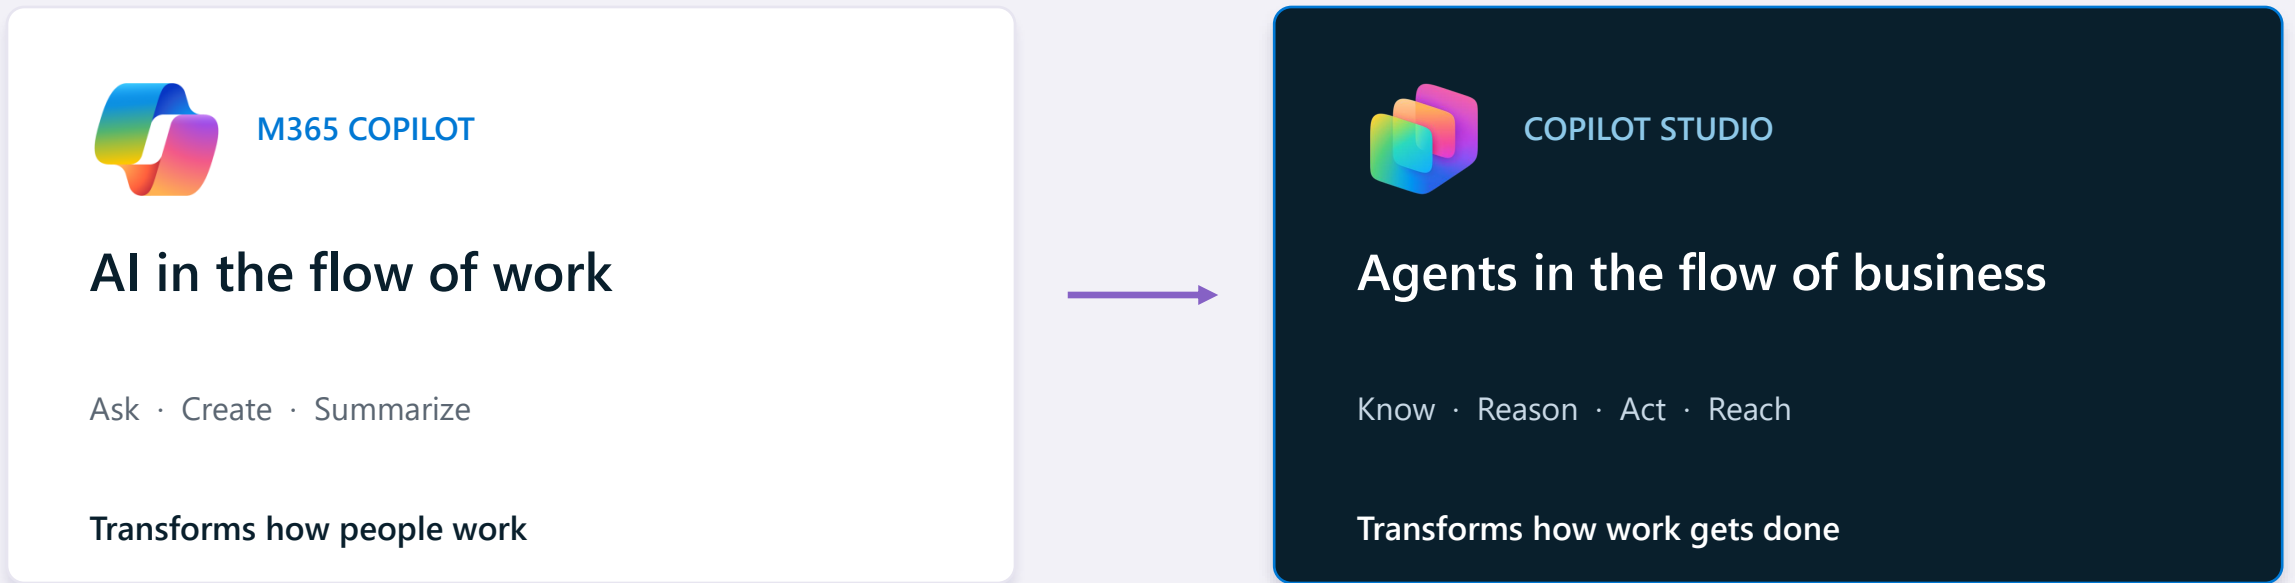

Building custom agents that know, reason, act, and reach users — across every channel of your organization

THE EVOLUTION

M365 Copilot changes how people work; Copilot Studio changes how work gets done.

The shift from AI in the flow of work to agents in the flow of business

The next layer of the Microsoft agent stack

What is Copilot Studio?

One low-code platform to build agents that **build, connect, act, and reach**.

BUILD

Create agents using natural language and low-code tools

CONNECT

Ground agents in your business data and systems with prebuilt and custom connectors

ACT

Turn conversations into actions using AI, workflows, and business processes

REACH

Engage any audience through the channels they already use

Built on Microsoft Power Platform Security · Governance · Lifecycle · Analytics

Accelerating Employee Onboarding with M365 Copilot

A hiring manager moves from onboarding questions to a completed onboarding request without leaving Microsoft 365 Copilot.

1

Ask

Need to onboard a new employee

- Role-specific onboarding guidance
- Equipment and access requirements
- Policy questions answered from approved DoIT knowledge

2

Act

Create and route the onboarding request

- Build recommended equipment package
- Calculate costs automatically
- Trigger approval workflows

3

Track

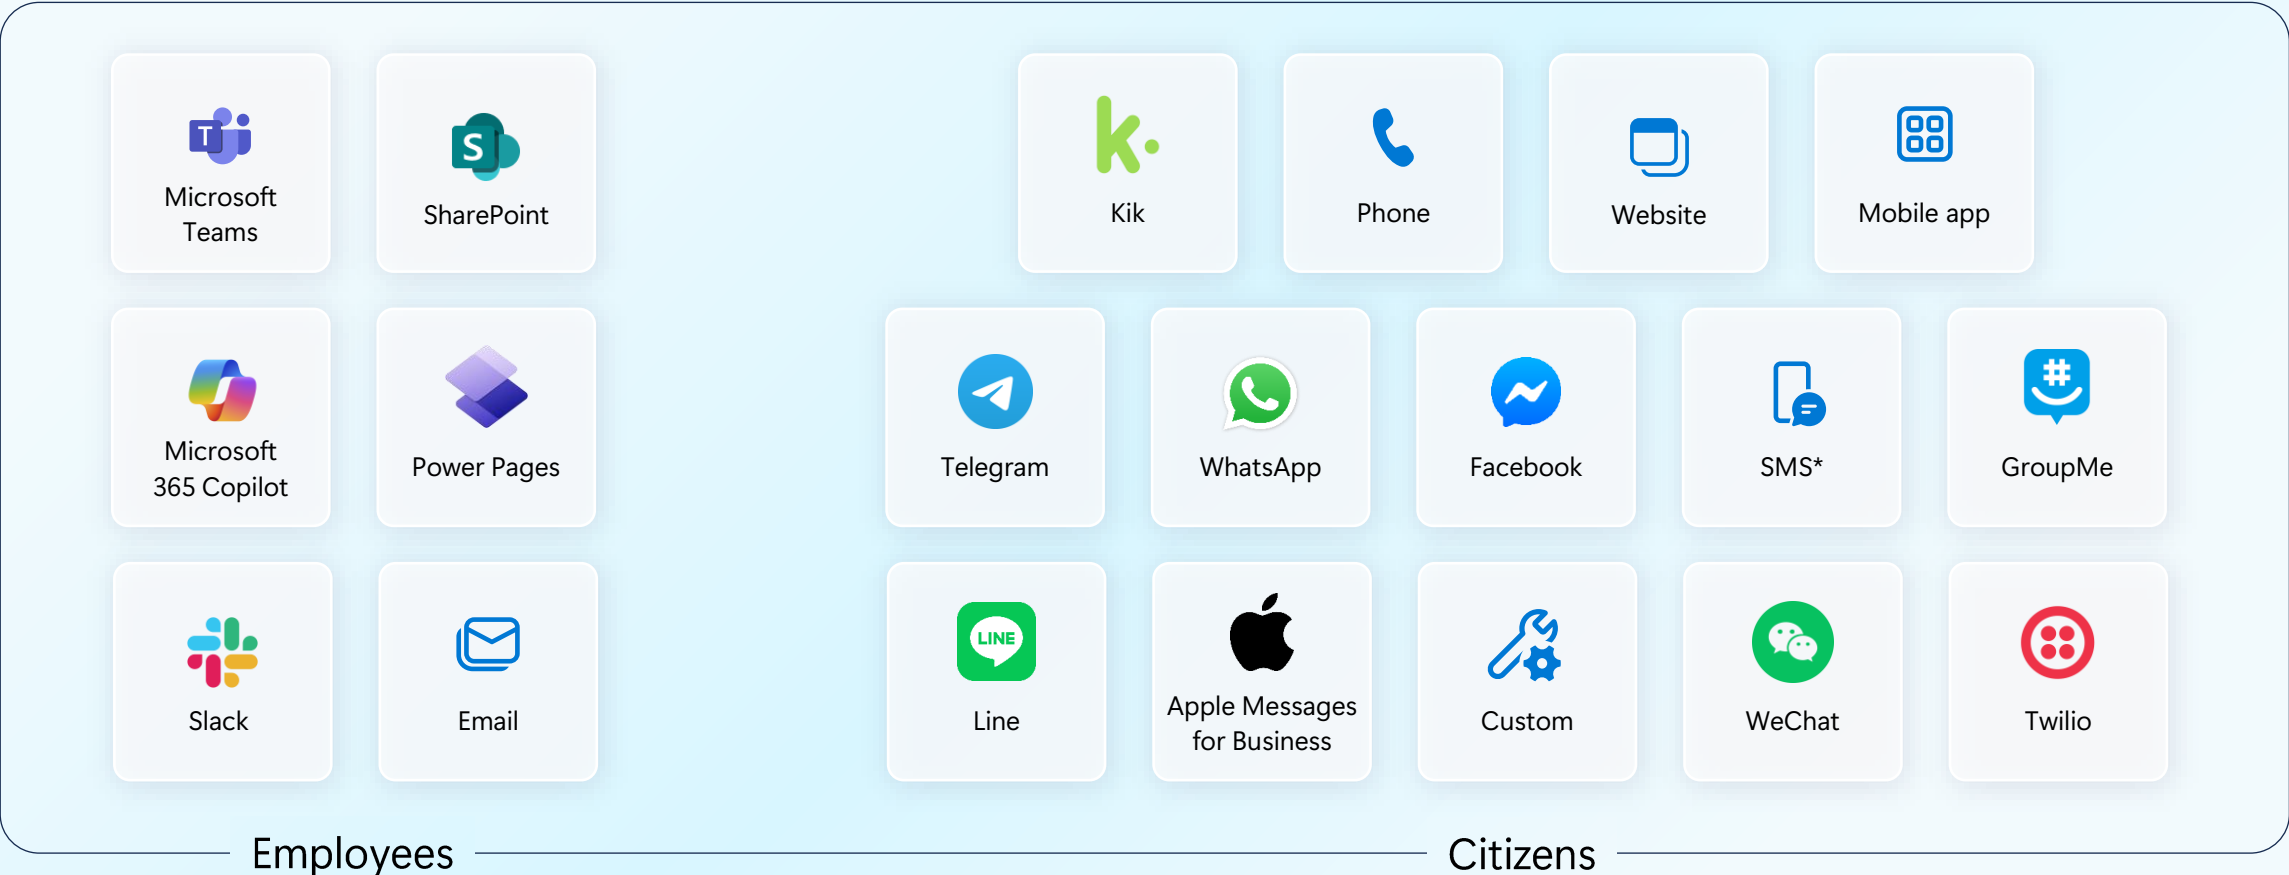

Monitor progress through completion

- Approval status
- Fulfillment updates
- Estimated completion dates

grounded knowledge • business action • approval workflow • status tracking

The same platform serves employees, citizens, and service channels

External audiences change the channel, identity, data, and operating model — not the platform.

Illinois Vendor Submission Assistant

A conversational agent reads vendor documents, validates them against business rules, and files a structured submission automatically.

1

Submit

Upload the proposal packet

- Agent greets the vendor on the website
- Vendor asks to submit a new proposal
- Vendor uploads the PDFs

2

Validate

Extract, summarize, and check

- Reads key fields — vendor, contact, \$\$\$ value
- Summarizes the details back to the vendor
- Flags a soon-to-expire insurance certificate

3

Track

File a tracked submission

- Vendor uploads an updated certificate
- Corrected date written to the record
- Confirms Submission ID VND-2026-##### and status

document extraction • business-rule validation • automated filing • tracked submission ID

Start where the solution belongs; connect where the value is clear.

Center of gravity picks the starting point — integration always stays open.

The Microsoft Agent Stack

Each technology serves a different purpose, audience, and level of engineering control.

M365 Copilot

BEST FOR

AI-powered productivity in the flow of work

KEY AUDIENCE

Knowledge workers across the organization

USE WHEN

Employees need AI in Microsoft 365 · M365 data is the primary source · Fastest path to productivity

BUILT BY

Business users and small teams with Agent Builder

GOVERNANCE FOCUS

Permissions and information readiness

Copilot Studio

BEST FOR

Purpose-built agents for business processes

KEY AUDIENCE

Employees, customers, citizens, and partners

USE WHEN

Automate business processes with actions, tools, and Agent Flows that connect to other systems · Orchestrate connected agents across a workflow

BUILT BY

Makers + IT + pro developers (fusion teams)

GOVERNANCE FOCUS

ALM, environments, DLP, authentication

Microsoft Foundry

BEST FOR

Custom, code-first AI apps and agents

KEY AUDIENCE

Users of custom apps, services, and domain solutions

USE WHEN

Custom AI applications and services are required · Advanced control over models, orchestration, and data is needed · Professional engineering teams own and operate the solution

BUILT BY

Software engineers · AI engineers · data scientists

GOVERNANCE FOCUS

Azure architecture, security, operations

Where to Start Learning with Copilot Studio

Curated resources to help your organization learn, build, and scale.

Agent Academy

Enterprise deployment, governance, security, and operational considerations
