

Copilot Studio: Enterprise Agent Platform Strengths

A positive, public-documentation-backed overview of why organizations choose Copilot Studio to build, govern, and publish AI agents across the Microsoft ecosystem.

Positioning Start with customer outcomes. Copilot Studio brings agent authoring, enterprise data, workflow actions, publishing channels, and governance into the Microsoft platforms many organizations already use.

Customer outcomes to lead with

Area	Microsoft perspective
Productivity integration	Publish agents to familiar channels such as Microsoft 365 Copilot, Teams, SharePoint, websites, and custom apps so users can access help where they already work.
Enterprise data	Ground agents in Microsoft 365 content, SharePoint, Dataverse, Dynamics 365, Microsoft Graph-connected sources, and other systems through Copilot and Power Platform connectors.
Security & compliance	Use Microsoft Entra, Microsoft Purview, tenant controls, environment policies, role-based access, auditing, and data loss prevention as part of the broader Microsoft governance model.
Agent governance	Manage environments, connectors, sharing, publishing workflows, admin approvals, telemetry, and lifecycle controls through Power Platform and Microsoft 365 administration experiences.
Business process automation	Let agents retrieve data and take action through Power Platform connectors, Power Automate flows, custom connectors, APIs, Dynamics 365, and line-of-business systems.
Low-code + pro-code	Business teams can start with natural-language and visual authoring, while developers extend scenarios with custom connectors, APIs, Azure services, and application lifecycle practices.

Reference architecture conversation

Channels Microsoft 365 Copilot, Teams, SharePoint, web, and custom app experiences.	Agent layer Copilot Studio instructions, topics, knowledge, tools, triggers, and testing.	Knowledge & data Microsoft 365, Dataverse, Dynamics 365, SharePoint, Graph-connected sources, and APIs.	Actions Power Automate, prebuilt connectors, custom connectors, and business workflows.	Controls Admin approval, DLP policies, environment strategy, RBAC, audit, and monitoring.

Customer evaluation prompt

"A useful way to evaluate Copilot Studio is to map your priority agent scenarios to the data, workflows, channels, security controls, and administration model you already operate across Microsoft 365 and Power Platform."
